

# MarketGauge ETF Complete Model

The ETF Complete model is a quantitative strategy that MarketGauge developed that combines the concept of trend strength, momentum, and ranking. The model ranks and trades the top three leading ETFs in three categories: U.S. Sectors, Country ETFs, and Global Macro ETFs, giving the model broad exposure to the leading trends world-wide.

## ETF Complete

Client Risk Profile	Activity Frequency		Market Exposure		Notes
	Scheduled	Unscheduled	In	Out	
Model designed to meet or beat the S&P 500 with better risk profile.	All entries and rotations are based on relative strength momentum and are unscheduled.	Each position could hit a stop or multiple targets. Stops and targets are published ahead of time.	Holds up to 9 ETFs in three categories based on market conditions and relative trend strength.	Alternative and short ETFs can keep the model mostly invested in most market conditions.	Trades liquid ETFs in U.S. Sectors, Countries, and Global Macro trends. Some positions may use leveraged ETFs. Includes inverse and alternative ETFs to profit in the most market environments possible. Average trade length is around 60 days.
